

Amalgamated Locksmiths are proud to be Lockwood MT5+ dealers

Lockwood MT5+

To guarantee the physical security of a mechanical locking system, the locking system must be technically advanced and features multiple layers of protection against manipulation and unauthorised key duplication. Lockwood MT5+ achieves this by combining 3 patented features;

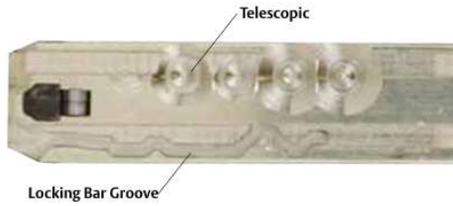

1. Double Alpha Spring

At the tip of the key is the revolutionary mobile interacting spring, the alpha spring. The alpha spring engages a unique pin at the rear of the cylinder mechanism creating another shear line.

2. Telescopic Pins

'Pin-in-pin technology' ensures both inner and outer pins must all be perfectly aligned at the shear line simultaneously

3. Locking Bar

Correct alignment of the locking bar pins depends on the correct combination key being inserted into the cylinder. The milled pattern, which runs the length of the key, interacts with the top bar and the horizontal pins, creating the required shear line

The Lockwood **MT5+** keying system is a patent protected in Australia until 2039. Lockwood **MT5+** combines multiple protective elements to create a triple locking mechanism, superior key control, and extensive master keying capabilities.
